

WingApps

Customize MySaaS Mobile with WingApps

WingApps are a state-of-the-art solution for Odyssee Partners who have clients with specific mobile needs but without designated budgets for customised programming. Use the economic Odyssee Mobile SaaS software solutions and adapt them to look as though they were made to measure for the client!

Odyssee Mobile is a pure SaaS platform which connects to any ERP/CRM/Back-office and makes the data available for SFA and FFA solutions, among others. The Enterprise edition is developed from Wing Applications (WingApps) which opens brand-new opportunities to make the SaaS platform more flexible than ever. With this WingApps Partners can simply continue to develop or even build on new modules to match the client's needs, without having to start again from scratch themselves.

Safety with chemical products

A company wants to use Odyssee Mobile Services for the maintenance team which regularly has to go and inspect leaks in storage systems for chemical products. The Odyssee application is ideal: timesheets, service reports, etc. However, the engineers also carry a device that also continuously monitors their state of health. Thanks to WingApps the Odyssee Partner can add or edit new screens and functionalities so as to integrate this application into Odyssee Mobile Services. There's no need to reinvent the wheel. As a result: the client can start using it within a matter of days.

Healthcare

A Partner specialised in health care wants to make its ERP fully mobile both for staff on the road as well as for mobile people in hospitals. They also need a planning and a To-do list. They also fill in timesheets and use materials. They don't carry out any service assignments with clients but they do administer care to a patient. They fill in a patient file rather than a visit report. Without having to worry about connectivity, synchronisation, offline and online options or data security, the Partner can simply convert the Odyssee Mobile application into a valuable mobile healthcare version.

Unique:

SaaS
+
Customized

Odyssee Mobile Architecture:

Odyssee Sync:

Synchronisation between the mobile applications and the existing back-office databases.

Odyssee Portal:

Used for the configuration, modification and management of data and users.

Odyssee Mobile Client:

The mobile application on the mobile device.

Odyssee Control Center:

All mobile devices, updates and upgrades are centrally managed, as are the registration of synchronisation times and security of data transfer.

By using the existing SaaS basis, development times are seriously curtailed, maintenance costs fall dramatically and you can easily respond to the future new demands of mobile clients. The advantages of SaaS software with the added value of a customised solution is the key to successful projects.

WINGS EXAMPLES FOR PARTNERS

Why should you, an Odyssee Partner, use the WingApps? Below you will find 3 examples showing how the existing Odyssee applications can be adapted via WingApps to specific needs, without the need to develop everything from scratch.

PLATFORM OVERVIEW

Integration with:

And many more!

Safety procedure for utility companies

An employee has to service high-voltage cabins. The safety procedure requires that at least 2 maintenance people are on site before work begins. Once again, the Odyssee Mobile Service is perfect; all it needs is a new module. With WingApps the Odyssee Partner can add their own module to the existing application.

WINGAPPS

Odyssee Mobile Enterprise edition is composed of a number of modules, so-called WingApps. These Wing Applications are:

Existing modules which work out-of-the-box

and yet can easily be adapted

or optimized with newly developed modules

DEVELOPING A MOBILE STRATEGY

Using a unique and dynamic platform to develop a mobile project still further and manage it on a daily basis, allows for a fast and flexible response to new user demands and changing business expectations, while keeping support costs nicely under control.

THE PLATFORM FOR ADDED VALUE

WingApps are the basis of every customised mobile application. The platform was designed to make mobility easier. It also provides:

- Easy connection with existing software systems
- Ready for future developments in hardware and communication methods
- Service Oriented Architecture that can connect with several databases
- Out-of-the-box support for multiple languages
- Simple to roll out and manage future updates
- Without the costs of custom made projects

SPREAD YOUR WINGS USING SAAS MOBILE WINGAPPS

• Fast & mobile developments:

WingApps simplify development and implementation by offering existing modules that can easily be adapted or extended with new functionalities and new modules.

• WingApps

These building blocks are the perfect starting point for personalised mobile applications.

• Several sources:

One single mobile application communicates with several back-office systems. Odyssee Wings applications allow users to view and edit data from several sources.

• Extensive support:

WingApps can easily be configured to work with additional devices such as barcode scanners, RFID, wireless printers, digital cameras and GPS.

• Maximum choice, minimum complexity:

WingApps have countless options for various devices and communication methods. The layout can be changed according to the device, while retaining the original business logic.

• Easy to support:

WingApps centrally managed architecture allows you to automatically carry out updates and upgrades from Odyssee Control Center to all mobile devices, wherever they are.

• Costs drastically reduced:

Because WingApps starts from the Odyssee Mobile SaaS platform, the total cost remains low.
